

# Sensitive Electronics Din Rail Surge Protective Device

## TST SERIES

The TST Series of SPDs (surge protection devices) are designed to protect sensitive electronic equipment from the harmful effects of transients and RFI/EMI interference. Models are configured for either parallel or series installation or can be either din rail or wall mounted. Units are rated as type 4 SPDs for application in Type 2 locations making the TST Series the ideal choice for incorporation into control cabinets for sensitive microelectronic based equipment.

TST units are self-contained in rugged plastic enclosures and employ twenty millimeter (20mm) MOVs as their key suppression elements. Units are line load sensitive and interface with the incoming power cables via screw terminals (barrier strips):

15 Amp Models are capable of handling #12 to #30 AWG Wire.  
30 Amp Models are capable of handling #6 to #20 AWG Wire.

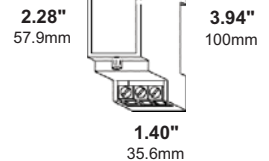

Product Specifications		Notes
Max Surge Current	10-40kA/Phase	
Short Circuit Current	100kA RMS Symmetrical Amps <sup>1</sup>	
Housing Rating	Plastic (UL94-VO) Polycarbonate	
Product Weight	8 oz. (small) 15 oz. (large)	
Fusing	Coordinated Current & Thermal	
Operating Frequency	50/60 Hz	
Operating Altitude	-200 ft. to +15,000 ft.	
Diagnostics	LED	
Safety Standards	UL 1449 3rd Ed. (Sept. 2009)	
I <sub>n</sub>	3kA	

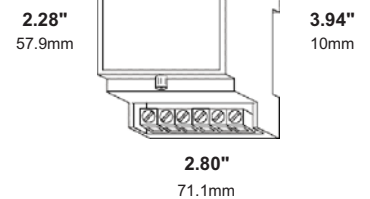

<sup>1</sup> When protected by Class T fuses.

### Dimensions

Small Case

Large Case

MODEL NUMBER	SERVICE VOLTAGE	CURRENT RATING	SURGE RATING	CASE SIZE	VPR			LOW VOLTAGE

**5, 10 and 20 Amp Models Available. Contact Factory for information on additional Models not listed above.**

### Ideal for:

- SCADA Systems
- LED Signs
- Programmable Logic Controllers PLC
- Point-of-Sale Equipment (POS)
- Surveillance & Security Systems
- Other Sensitive Electronics
